

**Amendments to the Specification:**

Please replace the paragraph beginning on page 2, line 10, with the following amended paragraph:

D Two primary types of tools are used to ~~finding~~ find information on the WWW: search engines and catalogs. Search engines operate by using a robot, or crawler, to request web pages and add the pages to an index. The search engine receives a word or phrase input from a user and returns matching pages from its index. One example of a search engine is Altavista, <http://www.altavista.com/>. Catalogs, on the other hand, are typically maintained by humans and are much smaller in scope. Like a library catalog, each web site is categorized, e.g. a toll-free directory might be categorized under Reference: Telephone Directories: 800 Directories: etc. One example of a catalog system is Yahoo!, <http://www.yahoo.com/>.

Please replace the paragraph beginning on page 13, line 19, with the following amended paragraph:

D2 Finally, at step 308, a new description of data of interest ~~interested~~ is added inside the selected category.
